# Introduction & Methodology

---

## OVERVIEW

Methodology, data collection and analysis by Informa Engage and Data Center Knowledge, exclusively for Dell.

2017 Data collected August 10, through August 21, 2017.

2020 Data collected October 26, through November 10, 2020.

Methodology conforms to accepted marketing research methods, practices and procedures.

## METHODOLOGY

### 2017

On August 1, 2017, Informa Engage emailed invitations to participate in an online survey to subscribers of Data Center Knowledge.

By August 21, 2017, Informa Engage had received 131 completed surveys from respondents indicating data center involvement.

### 2020

On October 26, 2020, Informa Engage emailed invitations to participate in an online survey to subscribers of Data Center Knowledge.

By November 10, 2020, Informa Engage had received 149 completed surveys from respondents indicating data center involvement.

## RESPONSIVE MOTIVATION

To encourage prompt response and increase the response rate overall, a live link to the survey was included in the email invitation to route respondents directly to the online survey.

The invitations and survey were branded with the relevant brand logo, in an effort to capitalize on user affinity for these valued brands.

Each respondent was afforded the opportunity to enter a drawing for one of four \$100 Amazon gift cards.

# Respondent Profile

# Data Center Involvement

Respondent samples are consistent over time, with most reporting their organizations have their own data centers.

**Question:** Which of the following best reflects your business, with regard to data center involvement?

Base: All respondents; 2020 (n=149); 2017 (n=131).

# Professional Profile: Job Title & Functional Area Involvement

Professional profiles and functional area involvement are larger consistent over time, with one key difference: the 2020 sample included more Directors or Middle Managers, and the 2017 sample included more non-management roles.

## Current Job Title

**Question: Which of the following best described your current title?**

Base: All respondents; 2020 (n=149); 2017 (n=131).

## Functional Area Involvement

**Question: Regardless of title, in which of the following corporate areas/functions are you involved? (Select all that apply.)**

Base: All respondents; 2020 (n=149); 2017 (n=131).

# Key Findings

# Impact of Data Center Cooling Costs on Overall Operating Costs

Over time, the cost of cooling data centers appears to have less impact on overall operating costs (2020, 41% indicating “significant” or “most” impact; 2017, 53% indicating “significant” or “most” impact).

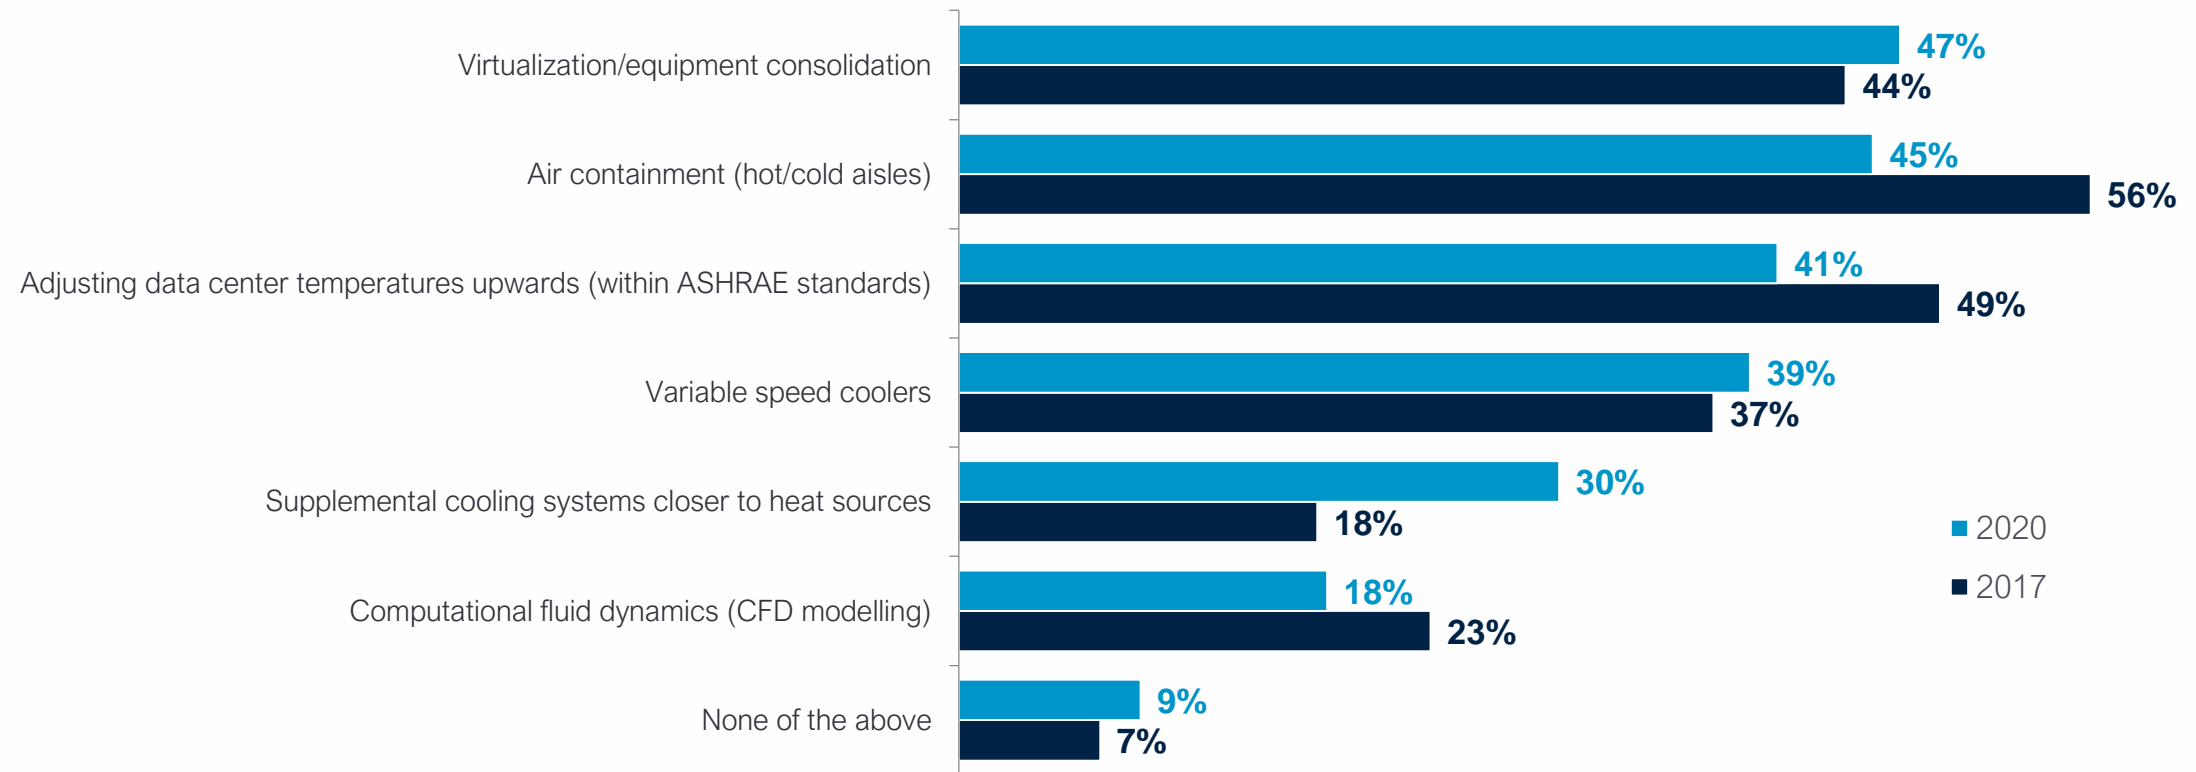

**Question:** How much does the cost of cooling your data center(s) impact your overall operating costs?

Base: All respondents; 2020 (n=149); 2017 (n=131).

# Reducing Demands on Data Center Cooling Systems

While the top four methods used to reduce demand on data center cooling systems remained the same, the degree of reliance two methods has changed over time. In 2017, respondents were more likely to rely on air containment (56% vs. 45% in 2020) and adjusting data center temps upward (49% vs. 41% in 2020). In 2020, respondents were more likely to leverage supplemental cooling systems closer to heat sources (30% vs. 18% in 2017).

**Question: How have you reduced the demands on your cooling systems in the data center? (Select all that apply.)**

Base: All respondents; 2020 (n=149); 2017 (n=131); multiple answers permitted.

# Data Center Cooling: Methods, Monitoring & Control

Respondents in both studies were most likely to use CRAC/CRAH units for data center cooling, followed by air-side economizers and evaporative cooling. Use of CRAC/CRAH units has diminished over time. In 2020, respondents are marginally more likely to monitor and control data center cooling systems manually than they were in 2017.

## Data Center Cooling Method(s) Used

**Question: What data center cooling method(s) does your company use? (Select all that apply.)**

Base: All respondents; 2020 (n=149); 2017 (n=131); multiple answers permitted.

## Means of Monitoring & Controlling Data Center Cooling Systems

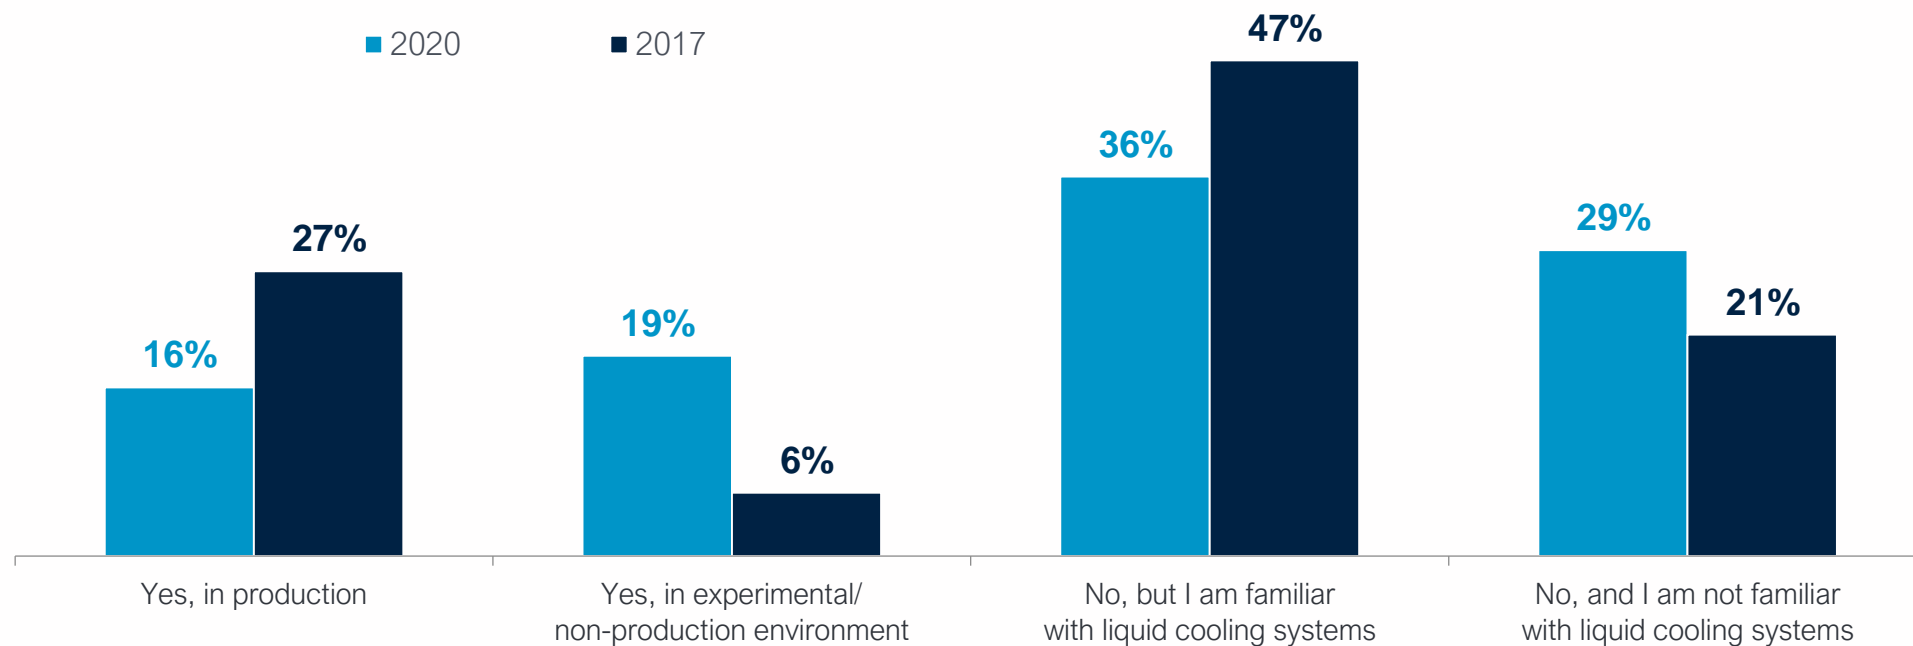

**Question: How do you monitor and control your data center cooling system? (Select all that apply.)**

Base: All respondents; 2020 (n=149); 2017 (n=131); multiple answers permitted.

# Use of Liquid Cooling Systems

A third of respondents in both studies reported using liquid cooling systems (35% in 2020; 33% in 2017). More respondents reported using liquid cooling systems in production in 2017 (27%) than in 2020 (16%).

**Question: Do you use a liquid cooling system?**

Base: All respondents; 2020 (n=149); 2017 (n=131).

# Liquid Cooling Techniques Used

Respondents in 2020 were more likely than 2017 respondents to report relying on water cooled rear door systems and/or in-row cooling. Usage of all forms of liquid cooling techniques has increased over time, with the sole exception of direct-contact liquid cooling.

**Question:** What data center cooling method(s) does your company use? (Select all that apply.)

Base: Respondents currently using liquid cooling techniques; 2020 (n=51); 2017 (n=30); multiple answers permitted.

# Primary Impact Area of Liquid Cooling

Respondents in 2017 were most likely to believe liquid cooling had the most impact on high-density cabinets or racks. In 2020, respondents were more divided on the highest impact area, with 27% indicating high-density cabinets or racks and 24% indicating high-performance computing.

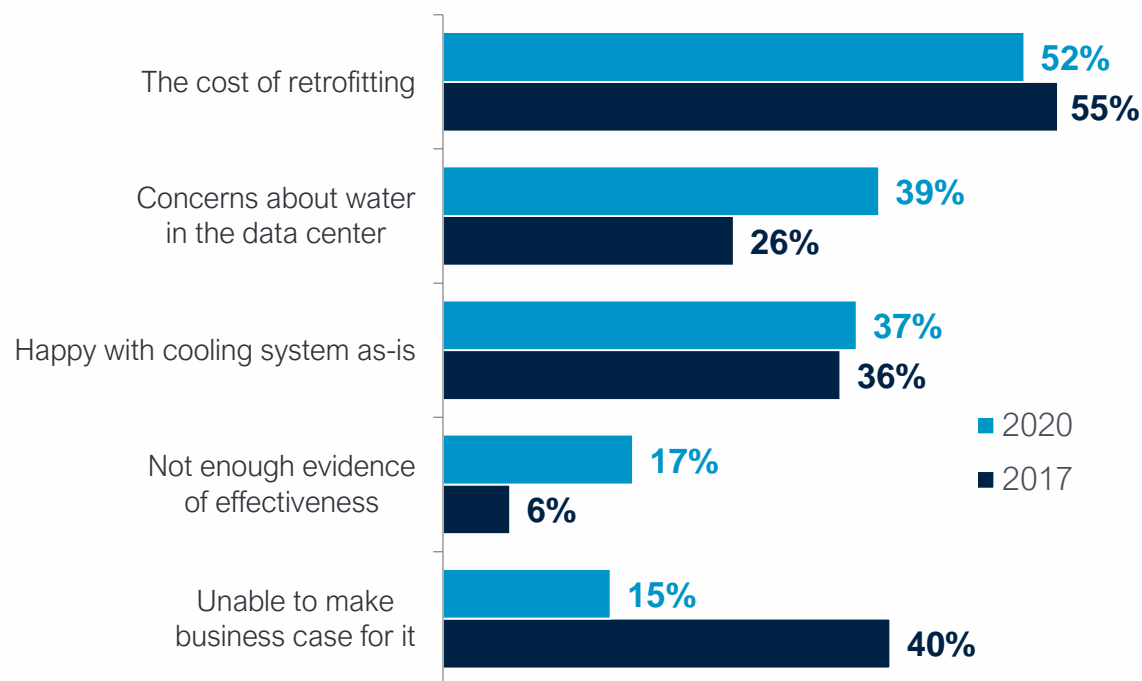

**Question: Where do you believe liquid cooling has the most impact in your data center?**

Base: Respondents currently using liquid cooling techniques; 2020 (n=51); 2017 (n=30); multiple answers permitted.

# Deterrents to Use of Liquid Cooling, Most Likely Implementations

When asked what has deterred their companies from implementing liquid cooling solutions, respondents in 2020 were more likely to cite concerns about water in the data center than were those in 2017. Over time, concerns about making a business case for liquid cooling have diminished significantly. 2020 respondents not currently using liquid cooling reported their companies would be most likely to implement in-row cooling (50%).

## Deterrents to Implementing a Liquid Cooling Solution

**Question:** Which of the following considerations have deterred your company from implementing a liquid cooling solution? (Select all that apply.)

Base: Respondents not currently using liquid cooling; 2020 (n=54); 2017 (n=47).

## Liquid Cooling Techniques Company Would Be Most Likely to Implement

**Question:** Which liquid cooling technique(s) would your company be most likely to implement? (Select all that apply.)

Base: Respondents not currently using liquid cooling; 2020 (n=54); 2017 (n=47).

# Likelihood of Considering Liquid Cooling in the Future

Most of those not currently leveraging liquid cooling were likely to consider doing so in the future. Over time, respondents remained most likely to consider liquid cooling when designing and building a new facility (70% at least “somewhat likely” in 2020; 69% at least “somewhat likely” in 2017).

2020

2017

**Question: How likely is your company to consider liquid cooling in the future?**

Base: Respondents not currently using liquid cooling; 2020 (n=54); 2017 (n=47).

# Timeline for Moving to Liquid Cooling

The timeline for those not currently using liquid cooling to report their companies would be prepared to actively consider doing so has not changed meaningfully over time, with 41% of those in 2020, and 43% of those in 2017 believing their companies would do so within three years.

**Question: When do you think your company will be prepared to actively consider a move to liquid cooling?**

Base: Respondents not currently using liquid cooling; 2020 (n=54); 2017 (n=47).

# Familiarity with Liquid Cooling Brands

Familiarity with both Dell EMC and HPE has increased significantly over time. Dell EMC retained its front-runner status in 2020.

**Question: Which liquid cooling brands are you familiar with? (Select all that apply.)**

Base: All respondents; 2020 (n=149); 2017 (n=131); multiple answers permitted.

# Number of Data Centers, Square Footage of Typical Data Center

The typical respondent reports owning and operating an estimated mean five data centers in both the 2020 and 2017 studies. The footprint of the average data center size has increased slightly over time, with an average 25,123 square feet in 2020, compared to an average 23,080 square feet in 2017.

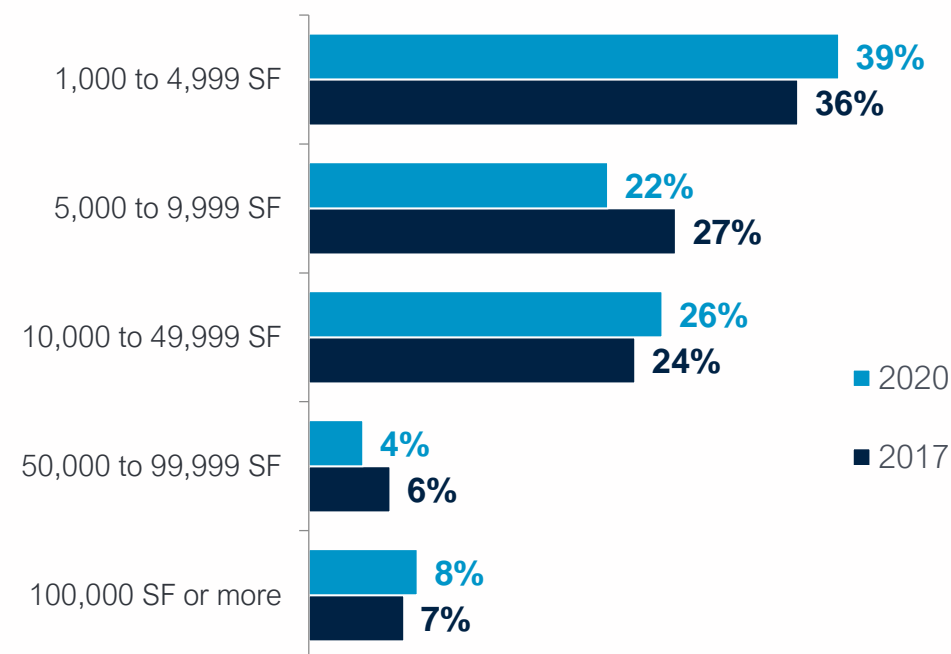

## Number of Data Centers Owned/Operated

**Question: How many data centers you own/operate?**

Base: All respondents; 2020 (n=149); 2017 (n=131).

## Square Footage of Typical Data Center

**Question: How big is your data center (if one)? How big is your average data center (if multiple)?**

Base: All respondents; 2020 (n=149); 2017 (n=131).

# Rack Power Density

Target rack power density has increased over time, with an average 7.3 kW in 2020, compare to an average 6.5 kW in 2017. As in 2017, a majority of respondents in 2020 report their rack power density is increasing (60%).

## Target Rack Power Density (kW per Cabinet)

**Question: What is your target rack power density (i.e., how many KW per cabinet)?**

Base: All respondents; 2020 (n=149); 2017 (n=131).

## Is your rack power density increasing?

**Question: Do you believe your rack power density is increasing?**

Base: All respondents; 2020 (n=149); 2017 (n=131).

# Importance & Impact of Sustainability (2020)

Three in four respondents (75%) report sustainability is at least “very important” to their organizations, including 26% who consider it “critical”. A majority (61%) also report a vendor’s focus on sustainability considerations actually increases the likelihood of purchasing from that vendor.

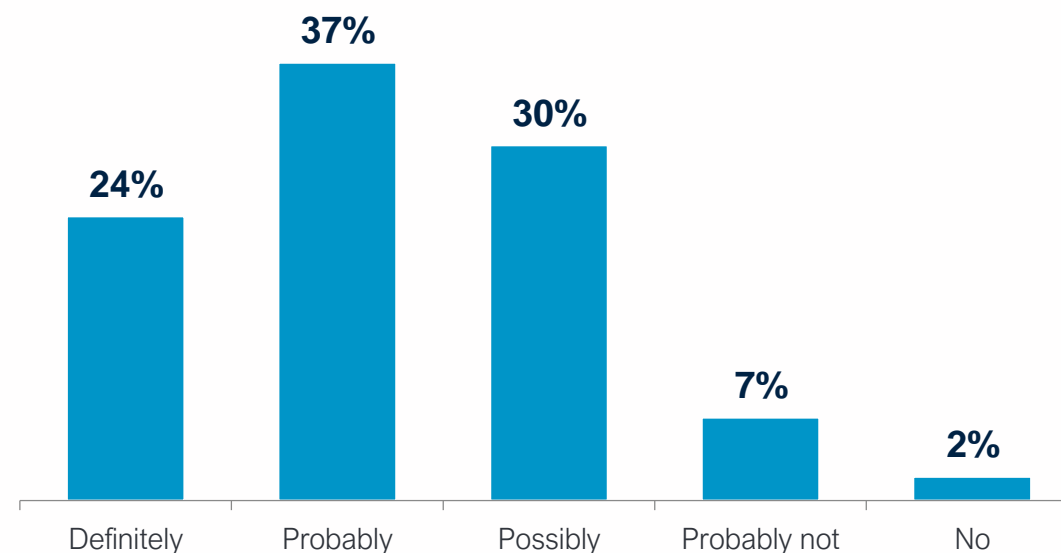

## Importance of Sustainability

**Question: How important is sustainability to your organization?**

Base: All respondents; 2020 (n=149). Question was not asked in 2017.

## Does a vendor’s sustainability focus increase likelihood of purchasing from that vendor?

**Question: Does a vendor’s focus on sustainability considerations (e.g., use of recycled or renewable materials) increase your likelihood of purchasing from that vendor?**

Base: All respondents; 2020 (n=149). Question was not asked in 2017.

# About Informa Engage

# informa engage

Informa Engage is the marketing services powerhouse behind Informa's trusted brands. We provide B2B marketers with unrivaled specialist audiences, deep knowledge of vertical markets, sophisticated data and content marketing expertise. Through our deep understanding of our customer's behaviors and changing needs, Informa Engage connects marketers to customers as they move from discovering a problem to identifying features and functionality of a solution to selecting a provider and making a purchase.
